

# FERROS<sup>®</sup>

AN OXIDIZED METAL FINISH.

 **Dryvit** | BUILD THE TREND

## The Modern, Distinct Look of Rusting Metal with Oxidation

In addition to its unique appearance, Ferros has hydrophobic qualities to repel liquids and contaminants, keeping the finish looking its best. Ferros forms a breathable film having excellent resistance to abrasion and long term weathering. Available in 4 variations of color and two effects, Ferros is a modern and elegant water-based specialty finish under the Dryvit brand.

Ferros may be applied over most common interior building materials including properly prepared and primed gypsum wallboard, cement board, plaster, concrete and masonry. It can also be applied over properly prepared and primed exterior cement plaster, concrete, metal, masonry and EIFS base coat.
